Economic Review 1988

Number Forty-two

Saskatchewan

89-01268/

Foreword

This year has been one of significant progress for the economy and people of Saskatchewan despite the extreme precipitation shortfall and dramatically lower crop yields. Internationally, we have witnessed the successful resolution of two major protectionist actions involving Saskatchewan potash and uranium. Prices for our wheat, coarse grains and potash have increased significantly. The forthcoming passage of the Canada-U.S. Free Trade Agreement will assure the access of Saskatchewan exports to the important U.S. market and will provide the economic foundation for a more efficient and productive Canadian economy.

Domestically, we have seen significant capacity additions to our natural gas production and distribution network. Northern expioration for uranium, gold and other precious minerals continues to provide significant benefits to northern communities. Completion of the Weyerhaeuser paper mill and the NewGrade Energy/Co-op Upgrader mark major accomplishments in diversifying the Saskatchewan economy. The Husky heavy oil upgrader will provide another important cornerstone for this diversified base. Encouraging the local manufacture of many of the inputs used in Saskatchewan projects is helping Saskatchewan manufacturers diversify their product lines and gain the expertise needed to compete beyond Saskatchewan's boundaries. Public participation efforts have led to new initiatives in the forest products, computer services, and mining sectors.

As we look toward the 1990s, I am confident that Saskatchewan can grow and diversify into an economy that is stable, prosperous and able to meet the challenges of an increasingly competitive global economy. The enterprise and initiative demonstrated by individuals jointly participating with government in the economic development and diversification of Saskatchewan has set the stage for increased opportunity and prosperity in 1989 and beyond.

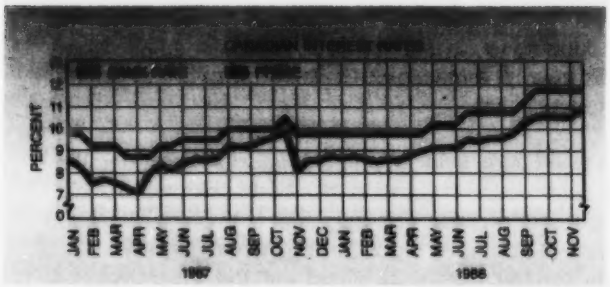
1988 in Review

In 1988, the Saskatchewan economy suffered through the worst drought experienced since 1961. The severe drop in production of cereal crops placed a strain on our economy which was balanced by significant improvements in prices for several of our major export commodities and major gains in the area of economic development and diversification.

World Economic Developments

As a province heavily dependent upon domestic and international trade, Saskatchewan is influenced significantly by world economic events including trade flows, commodity prices, interest rates and exchange rates. The short-run effect of the 1987 stock market crash appears to have been avoided in 1988 with business investment, exports and continued consumer demand providing the impetus for strong economic performance in several major industrialized nations including the United States, Japan and Canada.

Supply-demand balances for many commodities continued to improve in 1988 and this was reflected in price improvements for several of Saskatchewan's export commodities. Prices for wheat moved up 55%, designated barley up 44%, canola up 47% and potash prices increased by 42%. This improvement in commodity prices continues the trend noted in 1987. Oil prices, however, weakened by mid-year following discord amongst the OPEC producing nations over production quotas.



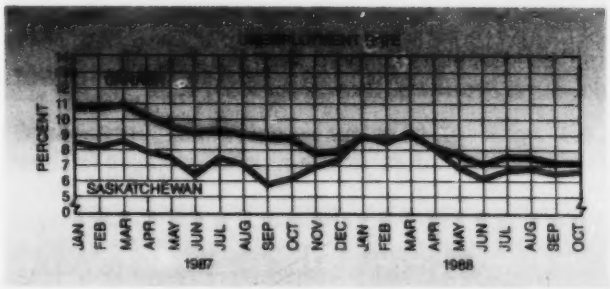
Large fiscal and trade imbalances, although showing some gradual improvement in 1988, continued to subject the world financial markets to significant instability. Exchange rates continued to fluctuate, dramatically affecting the competitiveness of industrialized nations. The G-10 average, an exchange rate calculated to reflect Canada's relative trade position with ten leading industrialized nations, rose 6.5% since the new year, exerting pressure on Saskatchewan exporters to reduce costs and increase revenues. Interest rates rose steadily throughout 1988 reflecting the concern monetary authorities placed on emerging signs of higher inflation. The interest rate for prime business loans in Canada, for example, rose from 9.75% to 11.75% during the January to November period.

The Saskatchewan Economy in 1988

Provincial economic growth slowed in 1988 in response to the well-below average harvest, soft oil prices, and continuing aftershocks of the sustained period of depressed commodity prices. Despite these negatives, the Saskatchewan economy continued to perform reasonably well with increases in resource production, manufacturing shipments, and non-agriculture employment. Consumer price inflation slowed during the year.

Total employment for the January to November period was 457,000 persons, down 2,000 from the equivalent period last year. Declines in agriculture employment were offset by strong employment growth in most non-agricultural sectors including mining and forestry, manufacturing, construction, transportation, communication and utilities, wholesale and retail trade, finance, insurance and real estate and business and community services. The total number of unemployed was unchanged from last year at 36,000 persons.

The average unemployment rate for year-to-date 1988 was 7.4%, up marginally from the 7.3% rate recorded for the same period in 1987. Saskatchewan consistently



maintained the second lowest unemployment rate in Canada during 1988.

The provincial population was 1,011,200 as of July 1, 1988, down 2,900 from the previous year. Interprovincial and international migration statistics indicate that 4,726 more people left the province in the first two quarters of 1988 than entered, up from a net out-migration of 2,084 people during the first two quarters of 1987.

Agriculture

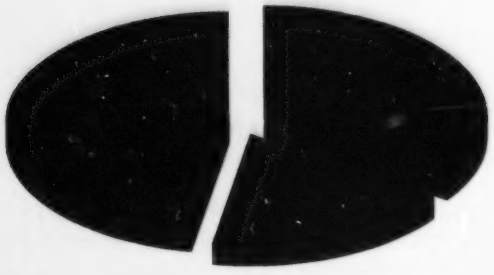
The North American drought had a dramatic effect on Saskatchewan grain production with only 11 million tonnes of the major grains and oilseeds being harvested, down 50% from last year's crop of 21.9 million tonnes and 46% below the five-year average. Crop quality was generally above average.

Spring wheat production was hard hit with only 5.3 million tonnes harvested, down 56% from 1987. Durum production was 58% below last year. Oats, barley and rye production also suffered from the extreme precipitation shortfall and heat stress. Canola production, although limited by lower yields, increased by 7.4% due to increased seeded acres. Specialty crops and mixed grain production was 396,900 tonnes, down 48% from 1987.

World wheat and coarse grain stocks declined dramatically in 1988 to levels not experienced since the early 1980s. Prices have risen significantly as a result. Prices for wheat rose from $110 per tonne to $170 per tonne over the past 12 months. Prices for oats, barley and canola have risen as well.

Statistics Canada semi-annual livestock survey estimates that there were 2.15 million cattle and calves on Saskatchewan farms as of July 1, 1988, up 5% from the previous year. There were also 845,000 pigs on farm, up 22% from the previous year. The number of sheep and lambs declined to 51,000, the continuation of a trend apparent since 1982.

Farm Cash Receipts Derived from the Sale of Agricultural Products, Saskatchewan, 1987



The return to higher prices for many agricultural commodities threatens to establish a false sense of security to world leaders dealing with agriculture policy reform. Agriculture policy reform continues on the agenda for the present Uruguay round of GATT (General Agreement on Tariffs and Trade) negotiations and a solution to the gridlock between the U.S. and European Community bargaining positions has yet to be reached.

Canada and Saskatchewan remained committed to protecting farmers in the face of the subsidy war and weather disturbances with a $518 million benefit from the Western Grain Stabilization Act, $477 million from the Special Canadian Grains Program and drought relief in the form of the Canada-Saskatchewan Livestock Drought Assistance Program and the Canada-Saskatchewan Green Feed Program. Special initiatives were also launched under the auspices of the Saskatchewan Water Corporation and Saskatchewan Crop Insurance. Total farm cash receipts for the first two quarters of 1988 rose 7.2% compared to the equivalent period in 1987. Realized net farm income is expected to rise to $1.2 billion in 1988.

Natural Resources

The price of crude oil, after remaining stable during the first half of 1988, softened considerably in the second half. Drilling activity was correspondingly strong in early 1988 with 762 oil wells drilled as of July 1, 1988 compared to 180 wells during the same period in 1987. Drilling activity in the second half of 1988 will be lower as the industry adjusts to the new price environment. Oil production for the January to August period of 1988 was 7.995 million cubic meters, a modest 2.1% increase over the same period last year.

The NewGrade Energy/Co-op Heavy Oil Upgrader, the first such facility in Canada, has been completed under budget and on time. The Upgrader is to produce 50,000 barrels of upgraded crude per day when fully operational. In September, Husky Oil joined with the governments of Canada, Alberta and Saskatchewan to announce an agreement to build a second heavy oil upgrader in Lloydminster, Saskatchewan. Site preparation began in the fall of 1988.

Natural gas drilling levels, production and exports all increased in 1988 following deregulation of the industry in 1987. With 675 wells drilled by early November, 1988, the 1987 record level of 568 wells drilled has been significantly surpassed. Gas production grew by a dramatic 40% over the previous year with most new production destined

for out-of-province markets, including the first major sale to the United States. Over twenty producers are now selling production in out-of-province markets. Transgas Ltd., the provincially owned gas transportation company, undertook a major expansion of its system in 1988, doubling capacity.

In January 1988 the Canadian potash industry signed a five year agreement with the U.S. Department of Commerce to suspend the dumping action launched against the industry by two New Mexico producers. Under the suspension agreement, no dumping duties are payable, but the Canadian industry must keep realized potash prices in the United States market above a minimum price. Potash production for the year-to-date was 4.808 million tonnes, a 13.7% increase over last year. Total sales declined a modest 2% over the same period, overshadowing a 25% increase in offshore sales of potash. Domestic prices have increased significantly in response to the suspension agreement.

Uranium production over the first three quarters of 1988 is 2% below 1987 record levels. Uranium sales have lagged behind production as short-term demand by U.S. utilities has moderated. The year 1988 saw the merger of Saskatchewan Mining Development Corporation and the federal Crown corporation, Eldorado Nuclear, to form the Canadian Mining and Energy Corporation or Cameco. This is now the world's largest uranium producer accounting for approximately 16% of western world output.

The Cigar Lake mining project has moved to the test mining phase with shaft sinking underway. The Midwest Lake project is also proceeding to the underground exploration phase.

Coal output, which increased in 1987 by 20%, is expected to increase to a record level in 1988. The production increase is the result of low water levels restricting the available hydroelectric capacity in internal and external markets. Construction on the Shand Power station commenced in 1988 and the project is expected to be completed in 1992.

Gold exploration activity remains strong with an estimated $45 million spent in 1988. The Star Lake gold mine reached full production capacity in 1988 of 33,000 ounces of gold per year and the Jolu mine poured its first gold bar on November 15, 1988. The Jolu mine will have an annual productive capacity of 50,000 to 60,000 ounces of gold. Several other properties are at an advanced stage of exploration and production decisions are pending.

Saskatchewan's forest products industry faced an estimated 10% decline in the level of housing starts in the U.S. during 1988. The industry received a boost in 1988, however, with the commissioning of the Weyerhaeuser paper mill and announcement of modernization of the Meadow Lake sawmill and plans for a mini-pulp mill and chopstick plant.

Total mining and forest product employment for the first eleven months of 1988 was 12,000, up 1,000 from the equivalent period in 1987.

Construction

The completion of several major construction projects and slower economic activity due to drought and weak oil prices led the total value of building permits issued in Saskatchewan during the first eight months of 1988 to decline by 26.2%. The value of industrial permits declined by 62.1% reflecting slower crude oil activity and the completion of the NewGrade Energy/Co-op Heavy Oil Upgrader in Regina and the Weyerhaeuser paper mill and pulp mill modernization in Prince Albert.

Total residential construction activity, hurt by the drought and rising interest rates, declined by 13.4% during the first eight months of 1988. Despite the modest slowdown, Saskatchewan continues to remain a haven for some of the most affordable housing in Canada. Commercial building permits were valued at $99.6 million, representing a 29.3% decline from 1987.

Manufacturing and Technology

Statistics for the first nine months of 1988 indicate that value of manufacturing shipments rose 2.6% over the equivalent period last year. Shipments increased by 2.9% in the food and beverage sector, 10.6% in the printing and publishing sector, and 8.7% in the metal fabrication sector. Shipments from the machinery sector increased by 19.9% compared to last year and chemicals and chemical products rose by an impressive 37.9%. Declines were noted in the non-metallic minerals and miscellaneous manufacturing categories.

Manufacturing employment for the January to November period of 1988 was up 4,000 compared to the same period in the past year. The increase in employment reflects strong activity in the manufacturing sector due, in part, to spin-off activity from several major projects including the

construction of the NewGrade Energy/Co-op Upgrader and the construction and operation of the Weyerhaeuser paper mill. Special efforts to maximize Saskatchewan content allowed fifteen Saskatchewan steel fabricators to complete over 40 structural steel contracts worth $7 million for the Upgrader.

The construction of the Shand power facility will continue to provide activity for Saskatchewan's manufacturing sector including the reopening of the Dominion Bridge Co. Ltd. to provide $25 million in structural steel and a $14 million Marubeni-Hitachi Ltd. facility recently constructed in Saskatoon to supply $35 million worth of turbines.

Other manufacturing projects under construction or in the planning phase include the Saskatoon Chemicals Ltd. sodium chlorate plant expansion, rolling mill improvements at Ipsco's Regina facility, a mini-pulp mill, chopstick plant and sawmill modernization at Meadow Lake.

The Saskatchewan advanced technology industry continues to exhibit steady overall growth in the face of strong international competition. Despite some consolidation in the industry in 1988, sales have exceeded $500 million and employment has approached the 3,000 level.

Of significant note in 1988 was the growth and development of an agriculture biotechnology industry. The number of agriculture biotechnology firms supplying innovative crop and animal products to the agriculture industry doubled in 1988. The establishment of Ag-West Biotech Inc. will provide an industry directed focus for the Province's research efforts to enhance the efficiency of agriculture production and establish secondary manufacturing opportunities through the commercialization of research.

Saskatchewan witnessed the emergence of its software industry in 1988. The industry is establishing a reputation as a supplier of quality innovative products for niche markets in such sectors as health, transportation and services. Saskatchewan's expertise has received international attention from such multinational corporations as AT&T of the United States which formed a partnership with CAPA Software Ltd. to market its hotel software. Another company, MSL, was the successful bidder on a Colorado contract for a worker's compensation software package worth $2.5 million. In addition, a Saskatchewan firm, International Road Dynamics, received a 1988 Canada Award for Business Excellence.

Prices, Incomes and Sales

Increases in the prices of consumer goods and services, as measured by the Consumer Price Index, moderated in 1988, falling to a year-to-date average of 4.7%, with inflation rates in the mid 3% range being recorded in recent months. Price increases were moderated by lower gasoline prices and higher interest rates. The slower rise in consumer prices was good news for workers whose value of average weekly wages and salaries rose a modest 1.2% for the first seven months of 1988.

The Outlook

The year began with several market signals indicating that the prospects for Saskatchewan's export commodities were improving. The North American drought has improved these prospects with significant improvements in wheat and coarse grain prices. Consequently, a return to normal precipitation levels in 1989, combined with several major investment projects, should allow Saskatchewan to experience a significant rebound in economic activity, incomes and employment.

The Uruguay round of the General Agreement on Tariffs and Trade (GATT) is critical to world agricultural policy reform and improving Saskatchewan's and Canada's access to international markets. The Canada-U.S. Free Trade Agreement is a significant element in ensuring Saskatchewan's longer term economic prosperity and is consistent with the trade progress achieved between Canada and the United States during the past 40 years.

The upcoming year will continue to highlight the importance of diversification and development to the Saskatchewan economy with several major manufacturing facilities achieving full production and employment. Commencement of the construction on the Lloydminster heavy oil upgrader will provide increased demand for Saskatchewan goods and services. Government diversification efforts channeled through such Saskatchewan initiatives as Buy Saskatchewan and Public Participation and the federal government's Western Diversification initiative will continue to provide for a more stable, prosperous future for Saskatchewan people.

Saskatchewan Economic Accounts

The Saskatchewan Bureau of Statistics has developed a set of economic accounts which can be used to trace the development and growth of the Saskatchewan economy.

The purpose of the accounts is to measure the value of economic activity in each sector of the economy. This is done by means of a balancing set of accounts similar to the annual income and expenditure statements of a commercial enterprise.

The Accounts have many useful functions. They consolidate information which is now provided through a number of scattered sources and organize it into a central framework. This allows many kinds of economic analysis to be performed ranging from monitoring current economic performance to analysis of structural change in the economy.

The Saskatchewan Bureau of Statistics has available upon request, many more detailed tables and other information concerning the Saskatchewan Economic Accounts.

Saskatchewan Economic Accounts

Saskatchewan Gross Domestic Product (GDP) measures the total value of goods and services produced in the province. By removing the effects of inflation (or deflation) it is possible to measure the volume of output.

In 1987 the Saskatchewan economy grew by 4.1 percent. After adjusting for price changes, Saskatchewan's real Gross Domestic Product increased by 0.1 percent. Final Domestic Demand, which is the demand for goods and services by individuals, the government and for investment purposes rose 3.0 percent in 1987 after adjustment for inflation.

The income received by farm operators from farm production decreased by 33 percent from 1986. Farm income would have been even lower without the $759 million payment under the Western Grain Stabilization Act and the payments made by the Federal Government to compensate export producers for the unfair subsidy competition.

Farm inventory depletions combined with increased imports offset the 21 percent increase in real exports and higher levels of consumer spending and business investment. This resulted in almost zero growth in real GDP in 1987. The volume of grain exports increased by 33 percent to reach record levels in 1987.

The volume of output for non-farm components of GDP increased by 4.1 percent in 1987. This growth was led by increased volumes of oil, potash and uranium exports, which along with improved prices in the oil industry reflected positively on income in the mining industry. Investment in the manufacturing industry more than doubled from the 1986 level with the start of the NewGrade Energy/Co-op Heavy Oil Upgrader. Investment was also higher in the communication, finance insurance and real estate and commercial services industries while government investment decreased marginally from 1986.
